TRUSTEES' REPORT.

To His Excellency the Governor and the Honorable Council.

The trustees of the Worcester Insane Hospital respectfully submit their seventy-fourth annual report, together with the reports of the superintendent and treasurer.

The trustees in their monthly inspection and in inspections made by various members of the Board, at times unannounced, have always found the institution in good condition, neat and well managed, the food of excellent quality and sufficient as to quantity, the patients well cared for, and as comfortable as the nature of their disease would permit.

They are glad to note that the hospital has been called upon to care for a continually decreasing number of patients, until the institution is now for the first time for many years free from overcrowding. It is a pleasure, also, to record the fact that the general health of the inmates has been excellent, and that no serious accident or epidemic has befallen them.

To the layman the most effective means toward contributing to the good health and general well being of the inmates of the hospital would seem to be employment of some kind, and preferably employment in the open air, and the trustees have, therefore, been specially interested in the efforts to get patients out of the wards and occupied in some useful work. That these efforts have met with a great measure of success is evidenced by the large number of patients whom they have found employed in the garden and about the grounds whenever they have visited the hospital.

In so large a group of buildings as these the matter of repairs is a subject demanding increasing attention and the constant employment of a considerable force of mechanics. During the past year a somewhat unusual amount of such work has been necessary in replacing ceilings and walls, disfigured by wear and by the installation of the electric lights, and as it was impossible to vacate the wards for this purpose, it has unavoidably resulted in some dirt, discomfort and confusion.

The building for male nurses we hope to have covered in during the coming month and ready for occupancy early next summer. We ask for an appropriation of \$5,000 for the furnishing of this building.

We recommend that a ward three stories in height be built in connection with each of our present excited wards, each to accommodate 75 patients, to carry out the ideas suggested by our superintendent, in which we heartily concur, for the care of the violent insane, the bed-ridden general paralytics and the phthisical cases. We ask for \$50,000 for building one of these wards the coming year.

We desire to use the basement of the present coal shed for bathing purposes and devote the remainder of the building to much needed room for the upholsterer's department and the manufacture of men's clothing. We ask for \$6,000 for this purpose.

Iron staircases should be put in the administration building, to replace the wooden ones, for the safety of the employees who are to occupy the fifth story. An elevator should also be provided to accommodate this and the other floors of the building. We ask for an appropriation of \$5,400 for the stairs, and \$2,200 for the elevator.

For the purchase of a tract of land jutting into the hospital property on the west line, and which it is very desirable the hospital should own, we ask an appropriation of \$4,300.

Owing to the failure of the city water supply for two days this fall, caused by a stoppage in one of the main supply pipes, the hospital suffered great inconvenience, and it was a cause of great annoyance and anxiety to the officials. It seems to us most desirable that immediate steps be taken to procure an emergency supply of water by sinking wells, installing pumps and erecting storage tanks of sufficient capacity to assure us of a generous reserve supply.

We were sorry to lose the services of Dr. A. I. Noble, whose integrity, ability and genial personality had won the confidence and esteem of associates and patients. He resigned Dec. 11, 1905, to accept the superintendency of the Michigan Asylum at Kalamazoo, Mich.

It is with sorrow we record the death of our former associate, the Hon. Rockwood Hoar. Few men are privileged to receive so many marks of esteem from his associates and community. We herewith record our appreciation of his high character and ability and the great interest he took in the affairs of the institution.

We renew our expressions of esteem and appreciation to the superintendent and the members of the staff, officials and employees for their faithful and efficient services.

Respectfully submitted,

GEORGE F. BLAKE. LYMAN A. ELY. T. HOVEY GAGE. THOMAS RUSSELL. SARAH E. WHITIN. FRANCES M. LINCOLN. SAMUEL B. WOODWARD.

Nov. 30, 1906.

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Insane Hospital.

I herewith respectfully submit the following report of the hospital for the year ending Nov. 30, 1906, it being the seventy-fourth annual report.

There remained at the hospital Oct. 1, 1905, 1,202 patients, - 589 men and 613 women. During the year ending Sept. 30, 1906, there were admitted 486 patients, -263 men and 223 women. Five hundred and ninety-six patients - 279 men and 317 women — were dismissed from the hospital. Of this number, 201 patients — 111 men and 90 women — were discharged; 136 patients - 70 men and 66 women - died; 194 patients - 61 men and 133 women - were transferred, and 65 patients — 37 men and 28 women — left on visit and escape, leaving at the end of the statistical year 1,092 patients, - 573 men and 519 women. Of this number, 852 were supported by the State, 3 women (habitual drunkards) by towns, 153 by friends and 84 as reimbursing patients. Of the 395 patients discharged and transferred, 82 (including 5 habitual drunkards, women) were reported recovered, 52 capable of self support, 41 improved and 224 not improved. Six were discharged as not insane. Fifty women were transferred by the State Board of Insanity to the Worcester Insane Asylum, 57 men and 27 women to the State Colony at Gardner, 28 women to the State Hospital, Tewksbury, 14 women to the Boston Insane Hospital, 1 man each to McLean Hospital and Westborough, and 1 woman to Danvers. Twenty-six men and 13 women were removed from the State, and 2 men and 14 women were boarded out.

There remained at the end of the year 110 patients less than at the beginning. The smallest number under treatment on any one day was 1,065, and the largest, 1,225. The daily average number was 1,157.92.

The percentage of recoveries, calculated upon the number of discharges and deaths, was 15.1; calculated upon the number of admissions it was 16.9.

The death-rate was 8, calculated on the whole number of patients under treatment, and 11.7 calculated on the daily average number.

We have had no serious accident during the year and no cases of contagious disease, except a few cases of measles, confined chiefly to the nurses and employees.

In November, 1905, Miss Linda A. J. Richards was obliged, on account of ill health, to resign her position as superintendent of nurses, and Miss Anna C. Farley was appointed in her place.

On June 26, 1906, 26 nurses, having completed the prescribed course of study and having successfully passed their final examinations, were graduated from the training school. Thirteen of these graduates remain with us as supervisors and head attendants. Eight are now taking a six months' postgraduate course in nursing in general hospitals, and others are planning to do so. This year there are 17 young women in the senior class and 46 in the junior class.

Aside from the general repairs, we have during the year repainted the walls and woodwork and taken off and replastered nearly all of the ceilings on the women's side of the house. The same is now being done in the male wards.

In our sewing room we have installed eight sewing machines and a button-hole machine, operated by electric motors, and are now able to manufacture our men's shirts and women's wrappers, besides all our bed linen and general household supplies. As soon as the necessary room can be provided therefor we hope to begin to manufacture our men's clothing.

The building for male nurses, provided for by the last Legislature, is now well under way and will no doubt be covered in during the coming month, and be completed and ready for furnishing early in the summer. For this an appropriation of \$5,000 will be needed.

The time has come, I believe, when better provisions should be made for our violent insane, our bed-ridden general paralytics and our cases of tuberculosis. In the thirty years since the hospital was built there has been great progress in all that pertains to the treatment of the insane, and many of the provisions then considered adequate for their care are now set aside as antiquated or worse than antiquated. This is especially true in regard to the violent insane. At the time the hospital was built it was thought necessary to provide single rooms for all such patients, as a protection to themselves and others. Here, when they became disturbed, they could be isolated, or if they were violent and refused to remain in bed they could be restrained by mechanical means. If noisy or sleepless, the recognized treatment was to secure quiet through the use of drugs. Few, if any, would at that time have regarded it as possible to treat such eases in a dormitory ward and in the same manner as a majority of the sick are cared for in a general hospital.

Experience has proved, however, that the isolation of patients is almost always followed by untoward results, and leads to habits and practices not easily corrected, and that dormitory treatment for the majority of these cases is perfectly feasible. In place of drugs and mechanical restraint, we now resort to the hot pack and prolonged bath as a means of allaying excitement and sleeplessness, and instead of isolating such patients we have come to feel that unless they can be constantly under the care and observation of a sufficient corps of competent nurses the best that can be done for them has not been done. In an overcrowded ward, with no dormitory except an open corridor, and only a single bathtub, we have found it difficult in all cases to apply this method of treatment, due regard being paid (as was necessary) to economy of service. But now after several years' trial, under these adverse conditions, I have no hesitancy in adding my testimony to the efficiency of this method, and in urging that the hospital be equipped with the means for more effectually and satisfactorily carrying it out. To do this, and at the same time provide for our general paralytics and our cases of tuberculosis, I would recommend that a ward three stories in height be built in connection with each of our present excited wards, each to accommodate 75 patients, and that an appropriation of \$50,000 for building one of these wards be asked for the coming year.

In a large hospital for the insane the proper bathing of its

patients is a source of no little anxiety on the part of the management. It is a matter that requires care, tact and judgment on the part of the nurse if accidents would be avoided, and especially in the case of a refractory patient. It may be subject to many abuses, and is not readily supervised when the bathing is conducted on the wards as now, and it requires, moreover, a great deal of time which the nurse could better employ otherwise. A central bath, under the charge of a bathing master and bathing mistress, would insure more satisfactory service in this direction, and would no doubt be a matter of no little economy for the institution. This could be provided for at a relatively small expense in the basement of our present coal shed, which could be well given up to this purpose, since it is of but little use for storage of eoal, as it will hold only a very small part of the coal now burned. The remainder of the building would furnish us the much-needed rooms for our upholsterer's department and for the manufacturing of our men's clothing. The estimated cost of these alterations is \$6,000.

To provide quarters for our increasing number of help, the fifth story of the administration building, left unfinished at the time the hospital was built, has been cut up into rooms. Before these rooms are occupied, better methods of exit in case of fire should be provided. The present wooden staircase should be removed and iron stairs put in their place. A passenger elevator should also be provided to accommodate this and the other floors of the administration building. The estimated cost of the iron stairs is \$5,400, and of the elevator \$2,200.

Owing to some accident to the city water supply the hospital was for two days and nights recently without city water, and obliged to depend upon wells upon the place for drinking water and for that used for culinary purposes, and upon water hauled from the lake to supply our steam plant. While such an accident may happen only once in a lifetime, the consequences resulting therefrom are so annoying and may easily be so serious that it would seem that some provision ought to be made to meet an emergency of this kind.

There is a small tract of land jutting into the hospital property on its west line, in close proximity to the women's wards and recreation grounds, which it is very desirable that the hos-

pital should secure. It can now be bought at a reasonable price, and if not bought by us will be cut up into building lots and no doubt soon built upon. Its control by the hospital is all the more desirable now that the remaining land on our west and northwest line has come into the hands of the city to be used for the purposes of a park, so that if this small tract is secured, we shall be forever free from encroachment upon this side of the hospital property. There are several springs and a small reservoir on this land which could easily be made of use to the hospital; in fact, they might very possibly prove large enough to furnish a temporary supply of water in cases of emergency like that above mentioned.

The following changes have taken place in the staff of the hospital: Dr. A. I. Noble, assistant superintendent, resigned Dec. 11, 1905, to accept the superintendency of the Michigan Asylum at Kalamazoo, Mich., and in July and October, 1906, Drs. Walter C. Haviland, James H. Mackintosh and Harry W. Hammond left us to enter general practice. Theodore A. Hoch was promoted from pathologist to first assistant physician, Freeman A. Tower from assistant physician to pathologist, and George B. Landers and Robert O. LeBaron from junior to senior assistants.

In the resignation of Dr. Noble the institution has lost a most valuable officer. He had served the hospital as assistant physician and assistant superintendent for eighteen years with a measure of service of the highest character. The deep interest which he showed for those under his care, his genial manner and his attractive presence at once won the confidence not only of his associates but of his patients and their friends. Although glad that this well-merited advance has come to him, and eager to congratulate him upon his appointment to so responsible and honorable a position, every one connected with the institution was sincerely sorry to see him go.

We wish to thank the proprietors of the "Worcester Evening Gazette" and the "Fitchburg Sentinel" for copies of their papers, and the Worcester Employment Society for sewing.

HOSEA M. QUINBY, M.D.,

Superintendent.

Respectfully submitted,

ALBERT WOOD,

Treasurer of Corporation.

DEC. 1, 1906.

WORCESTER, MASS., Dec. 4, 1906.

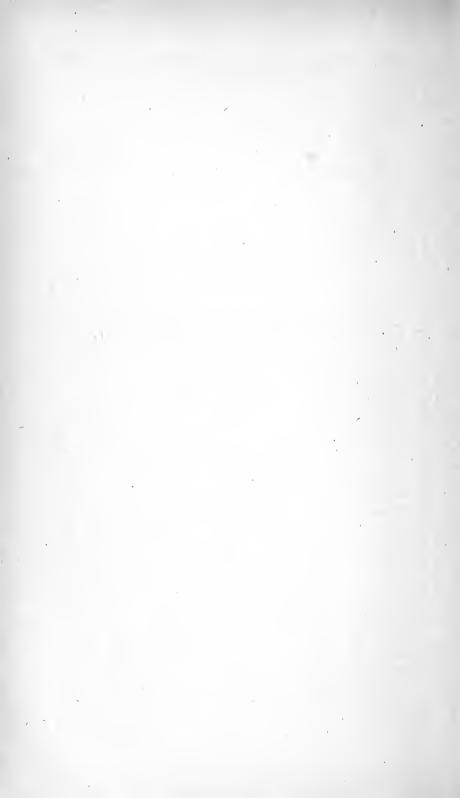

I hereby certify that I have this day compared the treasurer's statement of receipts and disbursements for fourteen months ending Nov. 30, 1906, with the books kept at the Worcester Insane Hospital, and find it correct. I have also inspected the securities representing the invested funds of the institution and find that their market value is as stated.

GEO. L. CLARK,

Auditor of Accounts.
